

SEARCH ENGINE TOOLS

1. www.Altavista.com - searches 100 million web pages for the words that you request. It searches both document titles and headings, as well as within the documents.
2. www.Google.com - without advertisements. It uses the Web itself to deliver more relevant answers to queries.
3. www.Excite.com - uses a combination of text and subject indices to search either by keyword or by concept.
4. www.Yahoo.com - is not really a search engine, but a hierarchically arranged subject index. It has been developed over a long time, with lots of editorial care, so the quality is very high. Browsing Yahoo is the best way to surf for good sites when you don't know exactly where you are going.
5. www.AskJeeves.com - works better if you type an actual question, not just a word or phrase. Ask Jeeves uses sophisticated natural language processing to understand and match your question to an extensive knowledge base.
6. www.Lycos.com - offers both keyword and subject searching as well as a Point rating system which rates web pages.
7. <http://teoma.com/> - large base of sites suggested by experts.
